Users could use this early version of the program on their personal computers. The first versions were limited to drawing structures in 2D and showing the lines, arcs, and circles. 1985 The first programmable extension language, AutoLISP, was introduced in this version. This allowed programmers to create their own extensions for use with AutoCAD. 1986 Another version of AutoCAD was released for the Xerox Star workstation. 1990 AutoCAD was ported to the Macintosh.
