System Requirements:

To play The Pirate Bay server you need to be running Linux with WINE installed on your computer. Wine and Debian-packages are recommended, but Ubuntu should work. Your computer should have at least 2 GB of RAM. You should be running the Steam beta client. A network connection with a stable internet connection is needed. The server needs to be running during the whole time the game is running, so you need to have a stable internet connection. Play with friends. We cannot guarantee that you will be able to play with other people
