They can also set up commands for operations to be performed on the dimension and text. In this mode, the template can be reused to create multiple drawings, and also used by system commands. With dynamic mode, the user can define dimensions and text individually for a drawing, and can create a series of commands. A template can be reused, but a new set of dimensions and text is created for each drawing. Grossman’s comments came as OPEC nations meet in Vienna to discuss the supply situation. The energy minister of Iraq’s Kurdistan region, Jawad al-Nasrawi, said the price of Brent oil could increase to \$40-\$50 per barrel. He said Iraq’s budget for 2018 is based on the assumption that the price of Brent oil will be around \$50 per barrel. Iraq’s oil minister, Jabar al-Luaibi, told local TV channel Al-Istiqlal earlier on Monday that the global oil price could rise to \$40 per barrel because the US shale oil industry is planning to cut production and make up for the drop in crude oil supply by exporting natural gas. US light crude oil production was at 9.7 million barrels per day in May, down from 10.3 million barrels per day in April. The cut in US production reflects falling prices and the growth of US shale oil. The price of West Texas Intermediate has dropped more than 40 percent since a high of \$115.75 per barrel in June 2014. US output of oil has remained steady or risen slightly over the past 18 months. The US has overtaken Saudi Arabia and Russia to become the world’s largest producer of natural gas. The US shale gas industry is the biggest exporter of natural gas in the world, with an estimated 37.3 trillion cubic feet (tcf) of gas in 2019, according to the US Energy Information Administration.1. Field of the Invention The present invention relates to an image display apparatus and a method of driving the same, and more particularly to an image display apparatus having a plurality of light
