3D CAD Autodesk 3D Studio Max (Max) is the 3D graphics software application that runs on the Windows, Mac, and Linux platforms, It allows a user to draw, sculpt, texturize, and animate 3D shapes. It also provides the ability to interactively render 3D scenes. The software uses a combination of live 3D modeling, rendering, and animation for workflows of 3D content creation. It was previously named 3D Studio, 3DS Max, or simply Max. It is the successor to the Autodesk 3D application. Max was created by Autodesk and was released on October 18, 1998. Max was publicly available for the first time on the Mac platform at Macworld in February 1999 and on the Windows platform at SIGGRAPH in June 1999. It was released as a beta version in October 1999. Max 2 was released on April 14, 2000, and in June 2001, the ability to run Max on the Linux platform was added. Since the Max software is distributed free of charge, it is considered to be a freeware application. The first version of Max was referred to as the "First Max", and the subsequent versions were labeled as "Second Max", "Third Max" etc. In 2011, Autodesk rebranded Max. Autodesk Max is now simply called Max. The desktop version was renamed Autodesk 3ds Max. The new application supports both Mac and Windows platforms. It is still in beta, and as such, the number of features available is still limited, but Max includes all the features in the former Autodesk 3D Studio including : Drawing creation from 2D images, 3D shapes, texts, polygonal models, parametric surfaces, and even videos. Animation and rendering. Video creation. Model-driven content creation. Time-driven content creation. Visual scripting (storyboarding). So far, we are doing well on all counts. Now we can move to the next challenge. We aim to combine the best concepts of high-end and low-end computer-controlled vehicles, because neither offers everything. There is no reason why such a combination can not be created. Take a look at the world's fastest high-end race car "Speed Factory" for an example: It is made to compete in the Supercars Championship and the World Touring Car Championship and it combines power and energy efficiency. Another example for the future of logistics: From the beginning, we thought that a GKN vehicle could have been developed in a similar way as a car. However, one thing is different: a vehicle that serves a purpose, has a clear role, and can be handled with ease. So, there
