Neurofibromatosis is a term for a heterogeneous group of autosomal dominantly inherited neurocutaneous diseases that are characterized by the development of cutaneous café-au-lait spots, iris Lisch nodules, intracranial neurofibromas, peripheral nerve sheath tumors and skeletal abnormalities. Neurofibromatosis type 1 is the most common form of neurofibromatosis and is caused by mutations in the NF1 gene on chromosome 17q11.2. Characteristic physical manifestations include large café-au-lait spots and numerous subcutaneous neurofibromas. The disease also features bone abnormalities, such as scoliosis and bowing of long bones. Other signs and symptoms associated with neurofibromatosis include pain, vision defects and epilepsy. This article focuses on a review of the current genetic knowledge of neurofibromatosis, and describes clinical features, diagnosis and management of patients. Walmart Holding's CEO says the company will continue to invest in brick and mortar and grocery delivery If you thought Walmart's recent grocery delivery and delivery deals were a harbinger of what could be in store, you'd be right. In fact, according to Walmart's CEO, he's hoping to begin its foray into the online grocery delivery business much sooner. Walmart, whose grocery pickup and delivery operations are separate entities, has been steadily growing its grocery delivery business since it began rolling it out at the end of 2014. Though this has proven to be somewhat difficult, with the company struggling to offer a one-stop shop for shoppers, the company has made incremental improvements. For instance, Walmart has more than doubled the number of groceries it delivers in certain parts of the country to about 100,000, and it recently expanded its Whole Foods 365 subscription program to 37 markets.
