But for this review of settings, behavior, and options with Photoshop CS6, I just don't have anything to add. The new tools are basically the same on the surface, but nonetheless welcome.

When opening a Photoshop file to comment, the user is automatically prompted to review the file. That first review succeeds and the user is taken to the comments panel. This first review only creates a snapshot of the document that has comments, to help you and the user get in and out of this review faster, and without opening or saving Photoshop documents. You can then keep working on the design, and leave the application. When you next return to the PSD, the comments panel will be refreshed.

- Standard: This is the default format. The image looks best without pre-visualization. It approximates a standard desktop monitor, one for which clients expect to get a print. It provides the best quality at the highest file size. However, the image isn't sharpened until you save the file.
