all, I can't ssh in or even ping it. I can't see any errors in the console either. I looked on AWS itself to see if there's anything there that might point me in the right direction but I couldn't find anything. What do I do to troubleshoot this? I'm running on Debian Linux 9.8. A: I had the same problem while I was running debian 8.9.0-8.9.0. The log file gave me some useful information. As you see below the instance was restarted, but there were some logs available in the file, so I suggest you to try to look at them.
