Yesterday Adobe put out a beta of Photoshop CS5 Extended, and it's a pretty reliable upgrade from the way things are
going. After all, it's faster and has new features. If you like editing at least take a look and see what it's all about, and if you get stuck on the first day or so, don't worry, Photoshop isn't that hard, just learn a little more about it and you'll get a lot farther with it. Technology moves fast so a lot of new things will show up.
So, go for it, Photoshop,Photoshop.

After looking at the RAW conversion features of Photoshop CS5, I decided to try it out. As a matter of fact, I used it almost a whole day without doing anything more than importing. It's not hard to use, but it does take a little getting used to, especially realizing that there isn't as much of an interface as there is in other software. There are a lot of place holders for all the different things you're sure to do. If you're more familiar with Lightroom and with the way it works, you'll be fine. But if you're like me and have to learn new things every day to keep up, you're going to have a bit of a learning curve. Then again, it took me 3 hours and 10 minutes to do nothing. I didn't do anything special. I just imported a bunch of pictures and added a new layer, styled a watermark on the background, and turned the image into a.eps file that is the same file type as a.tif file.
All in all, it was a good learning experience. I've used Photoshop before, but I didn't use to raw conversions that much before now. I'll give it a try again as I am still waiting for some files to import. I might even try it out for more than one day.
