The curriculum has repeated some of the topics covered in the aforesaid "Hands On" series and then adds some extra topics, such as how to apply filters in Photoshop. Considering that it has not been updated since 2012, it does not seem like a complete curriculum, but a series of hints and tips.

One of the neat new features of the iPad Pro with Apple Pencil is Adobe Photoshop Sketch. It's basically a visually orientated version of Adobe Photoshop where you use computer vision to find objects in images and then you can draw on top of them.

This feature is done with Adobe Sensei AI, and it's inspired by the work Adobe has done with Adobe Spark, a new web app which looks at a range of visual content on the web, analyzes it, and presents the user with relevant recommendations for actions that can be taken to improve the content.

The touch interface works kind of like the Pencil. It shows a guide layer (the active layer) at half the size of the canvas (1024 pixels, bigger than the iPhone) and the controls are visible in this layer.
